

Measure specifications: Breast Cancer Screening

Metric information

Metric description: The percentage of female Medicaid beneficiaries, 50-74 years of age who had a mammogram during the measurement year.

Metric specification version: HEDIS® Measurement Year 2022 Technical Specifications for Health Plans, NCQA.

Data collection method: Administrative only.

Data source: ProviderOne Medicaid claims/encounter and enrollment data.

Claim status: Include only final paid claims or accepted encounters in metric calculation.

Identification window: Measurement year.

Direction of quality improvement: Higher is better.

URL of specifications: [NCQA HEDIS measures](#)

DSRIP program summary

Metric utility: ACH Project P4P ☐ ACH High Performance ☐ DSRIP statewide accountability ☐

This is an information only metric.

ACH regional attribution: Residence in the ACH region for 11 out of 12 months in the measurement year.

DSRIP metric details

Eligible population

Measure	Description
Age	52-74 years. Age is as of the last day of the measurement year.
Gender	Female
Minimum Medicaid enrollment	Two years and two months prior to the measurement year through the end of the measurement year. For example, if the measurement year is the calendar year 2020, then the enrollment period is October 31, 2018 through December 31, 2020.
Allowable gap in Medicaid enrollment	One gap of one month for each the measurement year and the year prior to the measurement year.
Medicaid enrollment anchor date	Last day of measurement year.
Medicaid benefit and eligibility	Includes Medicaid beneficiaries with comprehensive medical benefits or family planning only benefits. Excludes beneficiaries that are eligible for both Medicare and Medicaid and beneficiaries with primary insurance other than Medicaid.

Denominator

Data elements required for denominator: The eligible population.

Required exclusions for denominator.

- Eligible population exclusions are listed in the eligible population table above.
- Metric specific exclusions:
 - o Beneficiaries in hospice care.
 - o Members 66 years of age and older as of the last day of the measurement year with frailty and advanced illness. See HEDIS® manual for more information.
 - o Bilateral mastectomy any time during the member's history through the last day of the measurement year.

Deviations from cited specifications for denominator.

- HEDIS® specifications require no more than one gap in continuous enrollment of up to 45 days during each year of continuous enrollment. To determine continuous enrollment for a Medicaid beneficiary for whom enrollment is verified monthly, as is the case for the ProviderOne data source, the Medicaid beneficiary may not have more than a 1-month gap in coverage (i.e., a Medicaid beneficiary whose coverage lapses for 2 months [60 days] is not considered continuously enrolled).

Numerator

Beneficiaries must qualify for inclusion in the denominator to be eligible for inclusion in the numerator.

Data elements required for numerator. One or more mammograms any time on or between two months and two years prior to the measurement year and the last day of the measurement year.

Required exclusions for numerator.

- None

Deviations from cited specifications for numerator.

- None

Version control

August 2023 update: The specification sheet has been updated to reflect the current version of the technical specification from the measure steward. No substantive changes were made to the DSRIP Metric Details. See HEDIS® for specific instructions.
